

**AMENDMENTS TO THE ABSTRACT:**

Please amend the Abstract as follows:

A ~~[[leg]]~~ foot ~~water-spouting~~ jetting device of the present invention comprises ~~includes~~ a foot-front water ~~spouting~~ jetting section for ~~spouting~~ jetting water toward the foot-front side of a user's foot and a water-~~spouting~~ jetting section direction moving mechanism for reciprocating the destination of water ~~spouting~~ jetting of the foot-front water ~~spouting~~ jetting section along ~~[[the]]~~ a longitudinal direction of the foot. A and ~~more preferably, it has~~ a plurality of spouts (jets) may be arranged side-by-side in the foot instep width direction ~~in-use~~ for each of the right and left feet. The ~~or-the~~ pressure of water ~~spouting received by the~~ jetting at a water arriving arrival point ~~[is]]~~ may be changed according to the ~~position of movement of the moving water arriving point~~ based on or the water ~~spouting~~ jetting amount ~~[[is]]~~ may be changed according to the ~~position of~~ based on movement of the moving water arrival arriving point. According to the above construction, such a leg water-spouting device can be provided that the sensory receptors existing on the skin are effectively stimulated and greater comfort can be obtained.
